# Rentokil Flexi Armour Range

## The first line of defence against rodents

# Risk of rodent infestations and the need for **effective proofing**

**90%**

of pest technicians said that the main reason why businesses develop a pest problem is because they don't rodent-proof their premises fully*

**Rentokil Technician Survey August 2020*

**Rodents can pose a significant risk to your business. They carry a wide range of diseases, can physically contaminate stock, damage building infrastructure and can ultimately have a negative impact on your business reputation. There are many points of potential entry into a building for a rodent.**

- **Gaps at the bottom of pedestrian doors**
- **Via uncapped wall weep vents**
- **Via gaps at the bases of loading docks**
- **Gaps in the external cladding of buildings**
- **Gaps in roller shutter doors**

It is therefore vital that you have **suitable and effective proofing measures** in place, to help prevent the entry of rodents and reduce the risk of a rodent infestation developing on your premises.

## RATS

Have a collapsible skeletion. A fully grown rat can squeeze through

A 24MM HOLE

## MICE

can squeeze through a gap that is only limited by the size of their skull which is about

6.35MM ON AVERAGE

# **Flexi Armour** Proofing Range

**Rentokil's Flexi Armour range provides sustainable rodent proofing solutions to help protect buildings internally and externally. By utilising hard wearing, flexible Kevlar and knitted steel mesh, Flexi Armour provides impenetrable barriers that prevent rats and mice entering your facility.**

## Flexi Armour Range

A range of Flexi Armour solutions which make up the full building proposition

### Flexi Armour Dock

Proofing gaps that exist around dock levellers which enable rodents and pests to enter the facility.

### Flexi Armour Weep

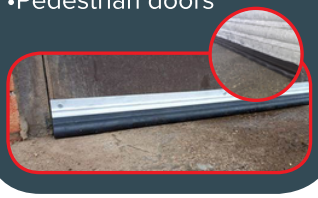

A breathable, yet sturdy stainless steel mesh that provides an effective seal to weep holes.

### Flexi Armour Door

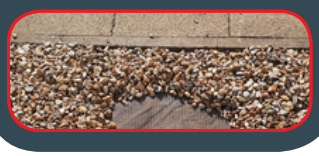

Proofing gaps around doors

- Roller doors (T bar)
- Pedestrian doors

### Flexi Armour Ground Mesh

A flexible and sturdy ground covering mesh that discreetly prevents burrowing pests.

### Flexi Armour Expansion

This solution eliminates the gaps in expansion joints on floors and walls, preventing rodents from chewing through and accessing voids.

### Flexi Armour Building Seal

Easy to install and fix around the outside of a building to seal gaps in the cladding or structure.

# **Flexi Armour** Door Range

## Flexi Armour Pedestrian Door Seal

This solution against rodents prevents ingress under pedestrian doors, protecting businesses from the risk of a rodent infestation.

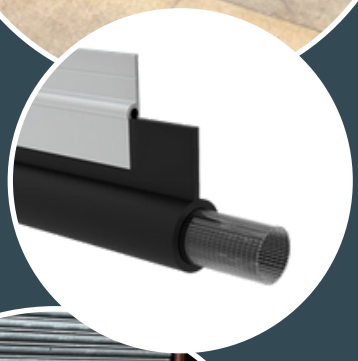

## Flexi Armour Roller Shutter Door

Designed and created by the pest control experts, Flexi Armour Roller Shutter Door is a hard wearing and robust solution that protects commercial premises from rodents.

## Flexi Armour Insulated Loading Door Base

Hard wearing mesh impregnated polymer base with an aluminium holding bracket. Designed and created by The Pest Control experts, it provides a 100% seal against intruding rodents.

### Hard Wearing and Robust

Extruded rubber with a unique knitted steel mesh core.

### Quickly and Securely Fitted

Fitted by our trained technicians to ensure there is no damage to the door on fitting.

### Lasts Over Twice As Long

Abrasion testing confirms this solution lasts over twice as long as equivalent competitor products.

### Suitability

Suitable for the majority of pedestrian and commercial loading doors.

### Unique to Rentokil Pest Control

Designed and created by 'The Pest Control Experts'.

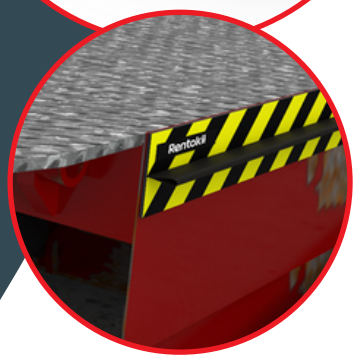

# Flexi Armour

## Dock Leveller Proofing

**Dock levellers provide a convenient way of loading and unloading freight from vehicles. However gaps around the dock leveller can offer pests an entry point into your premises, increasing the risk of an infestation developing in your logistics chain. The gaps also allow food and other waste material to drop down into the dock, which provides rodents with ideal feeding and nesting material.**

Rentokil's Flexi Armour Dock is a highly effective and sustainable proofing solution designed to eliminate the gaps around dock levellers. The solution is made from hard wearing Kevlar and steel mesh, which is flexible enough to cope with the variation in dock leveller sizes and their frequent movement, while remaining strong enough to prevent rodents from chewing through.

### The Business Benefits of Flexi Armour Dock

#### Targeted Proofing

First line of defence for rodents, reduces the requirement for internal rodenticides which supports compliance with CRRU *(The Campaign for Responsible Rodenticide Use)* regulations, and therefore reducing the environmental impact.

#### Effective Barrier to Rodents

Unique to Rentokil Pest Control, the Kevlar and steel mesh combination is flexible yet strong enough to prevent gnawing rodents creating entrance gaps.

#### Minimal Business Disruption

Proofing is expertly and swiftly installed by professional Rentokil technicians, minimising any impact on your business.

# **Flexi Armour** Expansion

**Most warehouses, factories and distribution centres have large floor expansion joints, which prevent floors from cracking under normal thermal expansion and contraction cycles. However debris can frequently build up in these areas, which can provide a suitable harbourage for rodents. The gaps can also act as a rodent 'super highway', allowing rodents to travel unnoticed around the building and cause damage to cabling, stock and property.**

Rentokil Flexi Armour Expansion is a unique proofing solution that is used to eliminate gaps in expansion joints in floors. The durable combination of knitted steel mesh and epoxy resin effectively seals the expansion joint, preventing rodents from accessing them.

## Benefits of Flexi Armour Expansion

### Resilient Epoxy Resin

The combination of knitted stainless steel mesh and our unique resilient epoxy resin provides a flexible yet sturdy barrier to prevent rodents chewing through to exploit expansion gaps.

### Audit Compliance

Proofing expansion joints supports your audit compliance by proactively minimising the risks associated with internal mouse and rat activity. This in turn reduces the need to use rodenticide.

### Versatile Solution

Can be fitted to expansion joints of different sizes and types.

# **Flexi Armour** Weep

**Weep holes are small gaps between bricks, which provide essential ventilation and drainage of the wall cavities in buildings. However they can also act as gateways for rodent and insect pests to enter your premises. Once inside the wall cavity, they can then potentially travel throughout the rest of the building with ease.**

Flexi Armour Weep is an effective pest proofing solution which can be fitted to weep holes of any size. Made from highly resilient, flexible stainless steel, the solution denies insect and rodent pests access to buildings via weep holes, preventing them from finding refuge in the cavity.

Rentokil
The Experts in Pest Control

# **Flexi Armour** Ground Mesh

## Rentokil's Flexi Armour Ground Mesh

Rodent pests are known to burrow underground, as this provides them with safe harbourage. Flexi Armour Ground Mesh is a highly corrosion resistant and sturdy ground covering that discreetly prevents burrowing pests.

# **Flexi Armour** Building Seal

**Functional buildings with cladding such as warehouses, food manufacturing and some retail premises often have gaps between the cladding and the brickwork, which allows rodents potential access to the cladding and ultimately to the internal areas of the premises.**

Flexi Armour Building Seal is a highly corrosion resistant, flexible stainless steel knitted mesh which can be swiftly installed around the perimeter of cladded buildings as an impenetrable barrier to rodents.

## Benefits of Flexi Armour Ground Mesh & Building Seal

### A Flexible Solution

Easy to mould, wrap and stretch around structures.

### Cost Effective

A long-lasting, highly corrosion resistant solution.

### High Grade Materials

Prevents damage from pests or the elements.

Rentokil
The Experts in Pest Control

As the world's leading pest control company, we can provide solutions to minimise infestations in your facilities.

We have extensive experience of working with businesses across the world and treatment plans can be tailored to meet the needs of specific challenges in your area.

**Our experts put robust plans in place to eradicate and monitor pest activity to protect your business.**
